
VENDING & FRICTIONLESS STORES

Vending Solutions

Traditional : Compass can deploy traditional vending unit for packaged snacks and ready to drink beverages. These will be strategically positioned in entrance areas to mess area, gyms or barrack accommodation and filled with a selection of branded products. Coffee vending can also be made available for self-vending. Gyms can be stocked with specific pre and post energy snacks & beverages.

Tap & Go : We can deploy latest technology of Tap & Go vending machines with our partner Coke that allows for **Fresh Food** options like Sandwiches, Salads, snacks, and beverages. The tap and go fridges make access easier, by allowing a direct grab of the product – thus ensuring no reliance on a robotic arm. It also allows for multiple products to be grabbed in a single go. Freshly prepared food at site, can be loaded into the machines, every day.

Frictionless Retail

The new age Retail stores that are not manned and frictionless allowing access 24/7. We can convert existing spaces into frictionless retail or put together free-standing space, allowing service personnel to access anytime, shop anything and just walk out. The technology is secure, no face recognition is done. Access is controlled via a tap of a credit card on the entry and charges are applied only on walking out from the store.

Note: we currently do not operate this store format in NZ; but are equipped to bring to market.
